It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Under (57) "Abstract", delete in its entirety and insert -- Disclosed herein are systems for monitoring and controlling operating modes in a network transceiver having a decoder and an encoder, as well as methods of operating the same. According to an exemplary embodiment, a controller is introduced for use with the Ethernet transceiver. The controller is associated with the encoder and decoder, and operates to control operating modes of the Ethernet transceiver. The controller includes both an encoder portion and a decoder portion. The encoder portion is operable to direct the encoder to encode data in one of an industry-compliant mode and a custom mode. The decoder portion is operable, in response to sensing data received in custom mode at the decoder, to direct: (i) the decoder to decode the received data in custom mode, and (ii) the encoder portion to direct the encoder to encode data in custom mode. --
